## [IoT Market Analysis And Forecast](#)

### About IoT

IoT is a communication of multiple devices over a network that enables data transmission between devices, including thermostats and sensors. It connects hardware, embedded software,

communication services, and IT services. It helps in developing smart homes, smart city, and online shopping with the help of connected devices in a network.

The adoption of IoT will improve with the increase in Wi-Fi and LTE wireless connectivity. Networks such as 2G, 3G, and 4G are being provided by service providers in Russia, which has increased the threat to data security. Stringent policies related to network security are being increasingly implemented. IoT security, which is dependent on network security, is expected to gain importance during the forecast period.

Technavio's analysts forecast the IoT market in Russia to grow at a CAGR of 28.47% during the period 2014-2019.
