Description

WiseGuyReports.Com adds" Global Gesture Recognition Technology Market for Smartphones 2015-2019 "Research To Its Database.

Gesture recognition refers to the ability of a device to identify and respond to the different gestures of an individual. Gesture recognition technology reduces the usage of hardware devices such as the keyboard and mouse and has in-built cameras that capture the motion performed by an individual. The gestures captured are then passed through a number of mathematical algorithms that process the image and match it against the template stored in the database. Mathematical algorithms enable accurate gesture detection. The image processing output is a set of parameters related to the image and, consecutively, the function is performed on the device.

Covered in this Report

This report covers the present scenario and the growth prospects of the global gesture recognition market for smartphones for 2015-2019.

The Global Gesture Recognition Market for Smartphones 2015-2019, has been prepared based on an in-depth market analysis with inputs from industry experts. The report covers the market landscape and its growth prospects in the coming years. The report also includes a discussion of the key vendors operating in this market.
