

Kovai Limited Announces Major Upgrade to ServiceBus360 with Version 2.0 Release

Kovai Limited released a major upgrade to ServiceBus360 on Nov 29, 2017. The v2.0 of ServiceBus360 is available with immediate effect.

LONDON, UNITED KINGDOM, November 29, 2017 /EINPresswire.com/ -- With the latest release, [ServiceBus360](#) takes the leap forward to help users manage and monitor their Azure Composite Applications with ease. One of the major conceptual changes to ServiceBus360 in this release is the addition of the new concept of Composite Applications. The release also brings new features - the User Access policy and repair/resubmit messages for Azure Service Bus Queue and/or Topic.

Manage Microsoft Azure Composite Applications using ServiceBus360

As Saravana Kumar, the Founder of ServiceBus360 says; "In the recent year's we have seen a paradigm shift in the way enterprise applications are built and deployed. Cloud computing has given organizations to opt for a hybrid cloud architecture over the on-premise configuration with a plethora of services to choose from. However, these come with their own challenges when it comes to management, monitoring, security and the tooling required to manage and monitor the complex integration solution. This is where we saw the challenges faced by users in using the Azure Portal to manage their complex integration solutions and decided to architect ServiceBus360 with functional capabilities to help users overcome this challenge."

With the concept of Composite Applications, users can easily group the Azure Services that make up the integration solution and manage them effectively.

"With the version 2, ServiceBus360 is going much further in monitoring complete Azure Integration solutions. Being able to monitor the complete range of services used in an integration solution is the best way to ensure reliability and availability for our customers," says David Grospeilier - Data Integration Architect & Co-Founder at MiddleWay, France

To know more about the features that have gone into this release, you can read this blog post. You can get started with a [30-day free trial of the product](#) from here.
