

Mobile Virtualization Market 2017 Global Trend, Growth, Demand, Size, Segmentation and Opportunities Forecast To 2022

This report covers market characteristics, size and growth, segmentation, regional breakdowns, competitive landscape, market shares, trends and strategies

PUNE, INDIA, December 4, 2017 /EINPresswire.com/ -- [Mobile Virtualization](#) gives the ability to run two or more instances of an operating system on the same phone, thereby giving the ability to run personal apps and services on one OS and the business services on another. The key factor which drives the growth of Mobile Virtualization Market is the increase in the need for isolation of personal and work data in order to handle them separately and conveniently. Moreover, growing cybercrimes has raised the need of security which, in turn, has further spurred the growth of this market. There is a high rate of adoption of mobile virtualization technology and solutions, as it eliminates the need of long distance cabling, work stations, and necessary infrastructure. However, the limited battery life of mobile devices and the necessity of having virtual data centre for mobile virtualization are hindering its growth. Geographically, North America accounted for the major market share in the year 2015, as companies in the region focused more on cost saving solutions with greater business flexibility and improved service levels. The Asia- Pacific region is expected to grow at a high rate over the next five years owing to growing urbanization, low labour and hardware cost, and increasing adoption of BYOD programs by enterprises, especially in developing economies of China, India, and South Korea.
