## [Tapered Roller Bearings Market 2017](#)

Tapered roller bearings have an inner ring, an outer ring, a cage, and rollers that are assembled together to distribute load evenly throughout the bearings. Inner ring and outer ring are also known as cone and cup, respectively. Tapered roller bearings have conical rollers that are supported by back-to-face rib arrangement on the cone. This structure enables these bearings to carry high radial loads and axial loads in one direction. Tapered roller bearings are generally manufactured with alloy steel or low-carbon steel.

The analysts forecast the global tapered roller bearings market to grow at a CAGR of 5.33% during the period 2017-2021.
