About [Server Rail Kit](#)

A server rail kit is the rack mounting hardware, which is used to mount heavier equipment such as the hard disk arrays to a server rack. The rail kit is dependent upon the type of rack and the amount of hardware being mounted on the rack. The rail kits are installed on to the rack using the mounting screws. The rail in the rack system essentially needs to be aligned and should be flexible enough to support the system mounted on it. The cage nuts are used in the rails, as they are the most cost effective, fast, and flexible method of mounting.

Technavio's analysts forecast the global server rail kit market to grow at a CAGR of 10.54% during the period 2017-2021.
