About [satellite-based earth observation](#)

Satellite-based earth observation is the process by which information related to Earth's physical, biological, and chemical composition are gathered from satellites by remote sensing techniques. The information gathered through satellites can be effectively used to monitor and predict weather changes, disasters and natural calamities, climate patterns, agriculture forecasts, oil and mineral deposits, and the availability of water sources. Satellite-based earth observation is used across various industries such as defense and intelligence, oil and gas, weather, agriculture, natural resources, engineering and construction, media and entertainment, and tourism.

Technavio's analysts forecast the global satellite-based earth observation market to grow at a CAGR of 13.23% over the period 2014-2019.

Covered in this report

The global satellite-based earth observation market can be segmented on the basis of vertical: defense and intelligence, government authorities, energy and natural resources, navigation and location-based services, industry, and living resources. The market is also segmented on the basis of data and VAS revenue.

Technavio's report, the Global Satellite-based Earth Observation Market 2015-2019, has been prepared based on an in-depth market analysis with inputs from industry experts. It covers the market landscape and its growth prospects in the coming years. The report includes a discussion of the key vendors operating in this market.
