

MiSun: Lighting for a Sustainable Future.

MiSun range of solar lights will amaze you. Compact, waterproof, magnetic, power-bank, so many features in a portable device.

BRISBANE, QUEENSLAND,
AUSTRALIA, December 6, 2017
/EINPresswire.com/ -- Press Release

Introducing MiSun: The world's most compact and functional solar LED lights

Wattlo Pty Ltd has launched what will be the benchmark in portable, programmable solar LED lighting. The MiSun range of products provide lighting for a sustainable future.

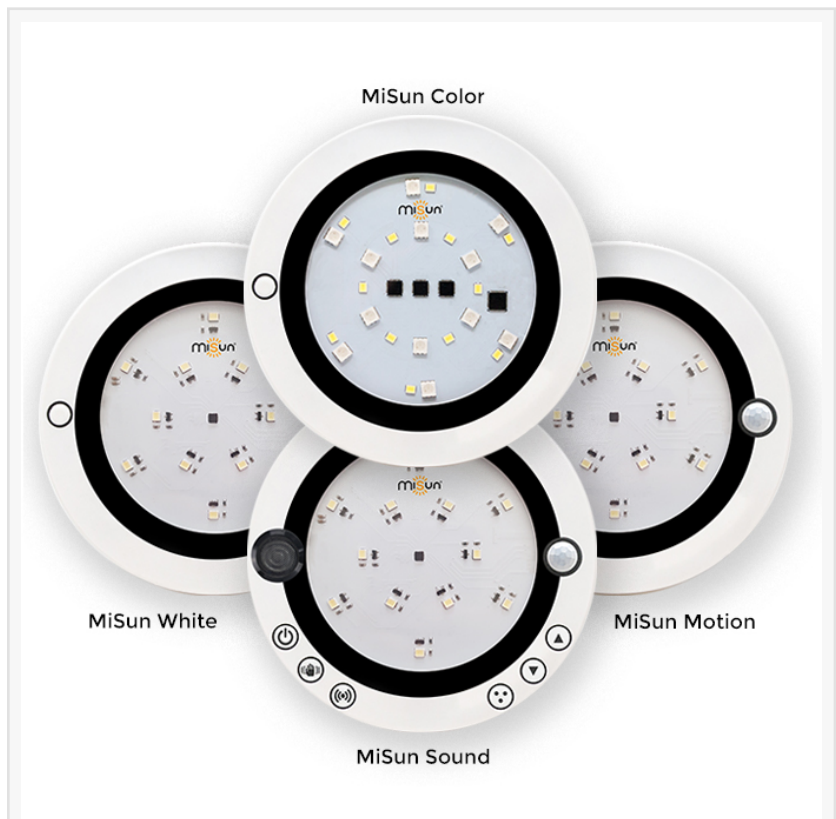

Delivering up to 12 hours of continuous high lumen lighting on a single full charge, the MiSun product balance solar energy capture, energy storage and light output perfectly. Designed for home and outdoors use, the MiSun range of solar LED products is dust and waterproof and has a minimum battery life of five years.

“We initially wanted to develop a simple solar light for use in developing countries, where lighting and access to the power grid is not possible. However, based on feedback during development we now have four MiSun products that are highly versatile and feature rich,” said Lee Knaggsi, Project Lead and Environmental Engineer.

At only half an inch thick and fitting in the palm of your hand, all MiSun products have inbuilt mounting

magnets, other accessories are available to allow the products to be used in a number of ways. Another handy

aspect is the USB charging port that can be used as a power bank for mobile devices.

MiSun Products - 4 models

MiSun Color with glow ring

The four products in the range are:

MiSun White – a powerful 324 lumen output white light

MiSun Motion – same features as MiSun White but with a motion sensor

MiSun Sound – same features as MiSun Motion but with AM/FM/SW radio

MiSun Color – premium model controlled by free App. Includes 16 color effects with speed control, 16.7M colors, timer on/off function and energy saving brightness control.

Market sector and uses

Camping

Boating

Fishing

Outdoor activities

Survivalists

Disaster Management

Entertainment

Smart homes

Home improvement

Visual effects

Emergency lighting

Household lighting

Dynamic lighting

“Bringing the MiSun products to market has been an international collaboration with the team spread across ten different countries. We’ve seen a continued double-digit growth in the global solar energy market in the past decade with LED lighting set to exceed \$50 Billion by 2022. It’s a great time to be involved in lighting up the world with renewable energy”.

How to Buy:

Kickstarter: <http://www.kickstarter.com/projects/misunlight/misun-lighting-for-a-sustainable-future>

“Launching on the crowdfunding platform Kickstarter, we hope to gain the support to mass-produce these lights for use in emergencies, disaster management, humanitarian response and to provide lighting for the estimated one billion people without lights in their homes.”
