[Solar Panel Market in the APAC Region 2017](#)

A solar panel (also called a PV module) is a collection of solar cells engraved from silicon wafers that generates electricity by capturing the sunlight. Solar panel systems include solar PV inverters, which connect numerous solar panels to a power grid to ensure improved efficiency and increased reliability in the grid. There are two types of solar cells: crystalline silicon and thin-film. Thin-film cells can be deposited as thin layers that measure less than 1 micron. These cells are less expensive compared to silicon and help manufacturers build solar panels of different sizes and shapes depending on the requirement.

The analysts forecast the Solar Panel market in the APAC region to grow at a CAGR of 11.5 percent over the period 2014-2019.
