About [Infertility](#)

Infertility is a widespread problem, and it is the inability to conceive after having regular unprotected sex. In one-third of the cases, infertility is because of either female infertility factors or male infertility factors. In rest of the cases, the cause is either unknown or a combination of both male and female factors. In males, infertility is due to a couple of factors including low sperm production, abnormal sperm function, or blockages that prevent the delivery of sperm. The cause of infertility can be difficult to diagnose, but many treatments are available. Treatment options depend on underlying problems.

TechNavio's analysts forecast the Global Infertility market to grow at a CAGR of 4.52 percent over the period 2014-2019.
