About [Tall Oil Fatty Acid](#)

Tall oil is also known as liquid rosin or tallol. It consists of three major components: unsaponifiables, resin acids, and fatty acids. Tall oil fatty acid is formed when esters and carboxylic acids are subjected to a temperature in the Kraft process of paper pulping. It is mainly derived from pine and coniferous trees. The increasing demand for tall oil fatty acid as a viscosity modifier, lubricant, and corrosion inhibitor will increase its market share in the oil and gas industry. The increasing demand for plant-based chemical derivatives over animal-based and crude oil-based chemicals will favor the growth of the market during the forecast period. The increasing demand for unconventional resources of energy will boost the market for lubricants and drilling fluids, thus driving the growth of the global tall oil fatty acid market.

Technavio's analysts forecast the global tall oil fatty acid market to grow at a CAGR of 4.76% during the period 2017-2021.
