Moonwalk Universal Announces Certification for Dell EMC ECS

PALO ALTO, CALIFORNIA, USA, December 13, 2017 /EINPresswire.com/ -- Moonwalk Universal, a specialist in large-scale data management solutions, today announced certification for Dell EMC ECS object storage. With the latest release of its software, Moonwalk brings file control and automation to enterprise storage infrastructure, intelligently moving file content to the appropriate location – on-premises file servers or object stores, offsite storage or cloud services.

Moonwalk slashes storage TCO, reduces complexity and optimizes storage resource utilization. The software's dynamic workload placement moves unstructured data according to project, location, user, size, name and age – putting files on the right storage at the right time.
The new software includes comprehensive support for the latest file systems and servers, cloud and object stores, including Windows 2016, NetApp 9.1 and OES2015, and Dell EMC ECS object storage. A REST API is available for advanced customer integration.

Along with its most advanced software yet, Moonwalk also introduced its most affordable: Moonwalk Starter Edition, available free for up to 25 TB. As with the full edition, Moonwalk Starter Edition automates file mobility from expensive primary storage and bloated NAS systems to lower-cost storage within the network or cloud services, without impacting applications or end users.

"The latest Moonwalk software effectively manages unstructured data growth that cannot be resolved with traditional data management products that introduce layers of inefficiency, vendor lock-in, or added complexity," said Michael Harvey, co-founder and Vice President of Business Development at Moonwalk. "We're confident of the immediate value proposition and we are pleased to offer a free edition to Dell EMC customers running ECS."

Benefits of Moonwalk include:

• Out-of-the-box support for Dell EMC ECS
• Reduced storage cost of ownership up to 80 percent
• Reduced size of production file system volumes up to 90 percent
• Zero middleware; zero single points of failure
• No limits on file count
• Reporting and analytics for continued optimization and improvement

Moonwalk Starter Edition is available for free at https://www.moonwalkinc.com/starter-edition

About Moonwalk Universal

Moonwalk Universal develops all-inclusive data management and protection software for major operating systems, storage platforms and the cloud. Moonwalk is found in banking, healthcare, manufacturing, government, research and other key industries. For more information visit https://www.moonwalkinc.com.
