

Rising Rate of Infertility to Impel the Growth of In-Vitro Fertilization (IVF) Hormones Market in Future

“In Vitro Fertilization (IVF) Hormones Market: Global Demand Analysis & Opportunity Outlook 2021”

BROOKLYN, NEW YORK, UNITED STATES, December 15, 2017 /EINPresswire.com/ -- The [global in vitro fertilization \(IVF\) hormones market](#) is

segmented into types such as follicle-stimulating hormone/ gonadotropin-releasing hormone (GnRH) and luteinizing hormone. Among these segments, follicle-stimulating hormone/ gonadotropin-releasing hormone (GnRH) segment is expected to occupy top position in overall in vitro fertilization (IVF) hormones market during the forecast period. Factors such as rising number of infertility cases, increasing awareness about infertility treatment, growth in per capita income of the population are expected to augment the growth of in vitro fertilization (IVF) hormones market.

Global in vitro fertilization (IVF) hormones market is expected to flourish at a CAGR of 10.1% over the forecast period. Moreover, the global in vitro fertilization (IVF) hormones market is anticipated to garner USD 7,571.2 Million by the end of 2021. Increasing number of infertility clinics across the globe and growing cases of infertility are some of the major factors behind the growth of in vitro fertilization (IVF) hormones market.

North America dominated the overall market of in vitro fertilization (IVF) hormones. According to Centers for Disease Control and Prevention, in U.S., 208,604 IVF procedures were performed, out of which, 70,354 infants were born. Additionally, rising success rate is expected to swell the demand for the In-Vitro fertilization hormone during the forecast period. Europe in vitro fertilization (IVF) hormones market is projected to grow at significant pace in the next few years. Asia Pacific is anticipated to witness a CAGR of 16.4% over the forecast period. Factors such as rising disposable income, growth in medical tourism and growing awareness regarding in vitro fertilization (IVF) treatment are likely to impel the growth of in vitro fertilization (IVF) hormones market.

Increasing Adoption of IVF Treatment across the Globe

Rising public awareness about infertility and its treatment has triggered the demand for in vitro fertilization (IVF) treatment. Moreover, as per human fertilisation and embryology authority, number of

IVF cycles has witnessed an increase in the past few years. This factor is anticipated to foster the growth of in vitro fertilization (IVF) hormones market.

Rise in the Number of Infertility Clinics

The market is expected to escalate at a rapid pace during the forecast period on the account of the increasing number of infertility clinics across the world. Apart from this, high percentage of coupled facing infertility issue (around 15% of total population) is expected to surge the demand for In-vitro fertilization hormone (IVF) market over the next few years.

Although, high cost associated with IVF procedures (USD 10,000-12,000 per cycle) is likely to inhibit the growth of the global in vitro fertilization (IVF) hormones market in the near future.

The report titled "[In Vitro Fertilization \(IVF\) Hormones Market: Global Demand](#) Analysis & Opportunity Outlook 2021" delivers detailed overview of the global in vitro fertilization (IVF) hormones market in terms of market segmentation by type, by gender and by region.

Further, for the in-depth analysis, the report encompasses the industry growth drivers, restraints, supply and demand risk, market attractiveness, BPS analysis and Porter's five force model.
