

Mark L. Kay, CEO of StrikeForce, Talks About Major New Release of GuardedID's Anti-Keylogging Software

*"In The Boardroom" On
SecuritySolutionsWatch.com*

NEW YORK, NY, USA, December 18, 2017 /EINPresswire.com/ -- StrikeForce Technologies, Inc. (OTC PINK: SFOR) announced a major software upgrade for GuardedID®, making it the best anti-keylogging software for your PC or MAC, with the most unprecedented security benefits.

"We are extremely pleased about this new release," says, Mark L. Kay, CEO of StrikeForce. "We have added several new critical features to enhance the security for both consumers and corporations. GuardedID's main security feature is its keystroke encryption capability. We are now extending its patented encryption capability to include Microsoft Windows 10 Operating system and Windows 10 desktop applications.

Another feature that people have always

loved is our Crypto-Color® visual verification capability, which shows you that GuardedID is protecting your browser inputs by highlighting what you type in green (or the color of your choice). Crypto-Color is now available as a browser extension and supports MS Edge, Chrome, Safari & Firefox and

“

We are honored to have Mark Kay, CEO of StrikeForce, join us "In The Boardroom" on SecuritySolutionsWatch to discuss this important GuardedID® upgrade and most timely cybersecurity solution.”

Internet Explorer browsers. Additionally, an anti-clickjack warning feature (which un-hides invisible objects embedded into infected iFrames) automatically comes as part of our Crypto-Color feature. Last, but certainly not least is our new anti-hooking capability which un-hooks unwanted malware from trying to steal your personal & confidential information.”

While cyber criminals know that keylogging malware is the de facto standard on how to steal login credentials and confidential information, they are constantly adding new attack vectors to trick and deceive. Clickjacking and hooking are examples of two new attack vectors that should not be underestimated. This new breed of spyware is also designed

to avoid detection from all the popular anti-virus programs. GuardedID can now prevent this new

breed of attack vectors from being successful.

“Today, practicing smarter cyber security requires a layered approach, an approach that addresses these new attack vectors like Keylogging, clickjacking and hooking. This is why this release is so significant for everyone, it addresses those attack-vectors head-on, and comes in just the nick of time,” says Kay.
