

Free Access Control Software For Leading Controller Brands

CredoID free & open-platform door access control software compatible with major controller & IP reader brands: HID, Mercury, Suprema & Axis.

HAWTHORNE, CA, UNITED STATES, December 18, 2017 /EINPresswire.com/ -- Midpoint Security introduces a free edition of CredoID [door access control software](#), compatible with [HID VertX door controllers](#), Edge EVO IP card readers, Mercury control panels, Suprema fingerprint attendance terminals and wireless Aperio locks by Assa Abloy.

In addition to the main-stream hardware, CredoID also supports Axis A1001 open platform controller using the industry standard Onvif Profile C protocol for [access control](#). The free life-time license of CredoID supports systems of up to 20 readers and includes all basic access control functions, as well as floorplans, attendance reports, and operator action logging, all delivered via an intuitive multilingual interface.

Additional features, such as automatic alarm notification, VMS integration, ID card production, Active Directory integration, mobile reader licenses, elevation access control, vehicle license plate recognition, alarm management and other advanced functions are available as optional upgrades.

CredoID access control software is exceptionally well adapted for expansion and integration: customers may start with just a few IP card readers and purchase expansion licenses as need, merge remote sites and branches containing different controller brands, and link the system with HR for attendance data export and company AD servers for user data import, seamlessly linking up with customers business systems and process, eliminating double data entry efforts and making security management easy.

With more than 2000 CredoID systems in operation worldwide in banks, schools, factories, powerplants, datacenters and many other high-security sites, Midpoint Security is making a bid on open standards and growing adoption of non-proprietary technologies in electronic security. Aivaras Junelis, the business development manager at Midpoint, states: "Customers' demands have grown over the years. Even the smallest businesses are requesting high-end features. Our freeware offer gives a chance to start with professional access control hardware in every project without paying top dollar for the software or signing annual service contracts. When a customer reaches the 20-door limit or requires advanced features he will have all options open. We'll do our best to keep the customers by offering an upgrade to CredoID Enterprise, but decision will be theirs to make. This is the nature and the beauty of open platforms!"

About Midpoint Security:

CredoID is an integrated access control and security management software compatible with HID door access controllers, Mercury control panels, Suprema RFID and fingerprint IP card readers.

Midpoint Security designs and develops Physical Access Control System (PACS) software suite CredOID, which supports a wide range of products from HID, Suprema, Mercury, and Axis. Midpoint also distributes hardware components needed to build security systems. By integrating solutions from different manufacturers, Midpoint offers unique advantages in PACS solutions for integration partners and end-users.
