Description

WiseGuyReports.Com adds” Global Fixed Satellite Service (FSS) Market 2015-2019 “Research To Its Database.

A fixed satellite service or FSS uses geosynchronous satellites for broadcasting purposes such as TV and radio, telecommunications, and satellite communication that are used by government, military organizations, small and large enterprises, and other end-users. FSS provides valuable source information to national intelligence and security organizations to fight crime and terrorism.

The satellites used for FSS generally have a low power output and require large dish-style antennas for reception. They have less power than direct broadcasting satellites. An FSS works on three bands: C-band, Ku-band, and Ka-band.

Currently, the Ka-band is used predominantly in North America to serve the growing needs of the government, media, and network users. It provides high bandwidth and frequency compared to the other bands.

Covered in this report

The global fixed satellite service market can be classified into two major segments based on service category: managed services and wholesale services. The global wholesale fixed satellite service market can be classified into five segments: TV channel broadcast, telecom backhaul, broadband services, content and video distribution, and military satellite communication.
