About [Wireless Video Surveillance](#)

Video surveillance is the process of monitoring or observing the activities, behavior, or movements of individuals or groups, for enhanced security. It is used by retail stores, government

departments, hospitals, transportation and logistics companies, and law enforcement agencies. However, video surveillance requires strong network infrastructure for efficient data transmission, which incurs high TCO. These includes replacement and upgrading costs of video surveillance equipment, cost to maintain network infrastructure, and cost of hiring professional expertise. Wireless video surveillance connects wireless network access points to surveillance equipment such as cameras, storage devices, and video recorders for efficient monitoring from a remote location and negates the need of investment in network infrastructure.

Technavio's analysts forecast the global wireless video surveillance market to grow at a CAGR of 21.35% over the period 2014-2019.

Covered in this Report

The report covers the present scenario and the growth prospects of the global wireless video surveillance market for 2015-2019. To calculate the market size, the report considers the revenue generated from the sales of wireless video surveillance solutions.

The market is segmented on the basis of geography into the Americas, EMEA, and APAC.

The report also presents the vendor landscape and a corresponding detailed analysis of the top five vendors in the market. In addition, it discusses the major drivers that influence the growth of the market and outlines the challenges faced by vendors and the market at large, as well as the key emerging trends.
