Description

WiseGuyReports.Com adds" Li-ion Battery Market for AEVs in France 2015-2019 "Research To Its Database.

Li-ion batteries are rechargeable batteries used for powering AEVs. The use of battery-operated vehicles helps to reduce carbon emissions and the dependence on other fossil fuels. Li-ion batteries are used as an alternate source of power in HEVs, while in BEVs and PHEVs, they are used as a primary source of power. BEVs and PHEVs use electric motors for propulsion, while HEVs use both ICE and electric motors. The use of this double fuel system makes HEVs more efficient and the preferred choice among end-users. The battery used in AEVs is automatically charged during the transportation through regenerative braking mechanism and is completely refilled or recharged through the power supply of residential or commercial charging socket at voltages ranging from 110 volts to 440 volts.
