Summary

This report is the result of extensive market research covering the construction aggregates market in Denmark. It contains detailed historic and forecast market value data for the aggregates market and its categories (construction sands, gravel & pebbles, crushed stone, chippings (marble chippings & others), waste-based aggregates and pre-coated aggregates), including data by domestic production, supply balance, existing stock, import value and export value.

"Aggregates in the construction industry are naturally occurring, manufactured or recycled minerals, which form an essential element of all construction activities. Aggregates are hard and granular materials that are used either independently or in conjunction with lime, cement and bituminous binders for construction activities."

"Aggregates (Construction) in Denmark to 2020: Market Analytics by Material Type and Category" provides an overview and insight into the operating environment of the aggregates industry in India. It is an essential tool for companies active across the Denmark construction value chain and for new players who are considering entering the market.
