Description

WiseGuyReports.Com adds" Global Prebiotic Ingredient Market 2017-2021 "Research To Its Database.

Prebiotic ingredients are non-digestible food components that stimulate the growth and activity of the colonic microflora. Prebiotics do not get digested in the small intestine. They are soluble fibers and are beneficial for the multiplication of good bacteria. Prebiotics are the nutrition source for good bacteria, and thus, they are good for the digestive health. Prebiotics are high in fiber. They are consumed as dietary fibers. Foods that are high in fibers are rich in prebiotics as well. Raw forms of chicory root, Jerusalem artichoke, dandelion greens, garlic, leeks, onion, and wheat bran are good sources of fiber. Therefore, prebiotic products derived from these sources are gaining the attention of manufacturers. Owing to the demand for naturally derived prebiotics, manufacturers prefer producing prebiotic ingredients from these sources.
