

# Smart Cannabis Corp. Gets Green Light to Publish its SMARTAPP Agriculture Automation App in Apple App Store

SACRAMENTO, CA, USA, January 11, 2018 /EINPresswire.com/ -- Smart Cannabis Corp., (OTC PINK: SCNA), announced today that its SMARTAPP for Apple iPhone and iPad is now available for download on their app store. The Next Generation Farming SMARTAPP was developed exclusively by Smart Cannabis Corp. to provide complete remote management for their Smart by Design line of automated greenhouses as well as to offer a stable software platform for other companies to license and build upon.

The SMARTAPP, known as NextGen Farm in the Apple App Store, is immediately available for download, free of charge, and includes demonstration mode - available by logging into the user and password as "demo". Prospective clients can get a sense of controlling a live automated greenhouse environment similar to the interface and control system used by active clients who control their greenhouse system functions remotely. Enabling their clients to grow more efficiently with this app will result in a greater return on investment, making Next Generation Farming an essential all-around agritech solution for farmers.

The company will sell the SMARTAPP to existing and new client installations on a subscription basis and already has sales commitments for approximately fifteen SMARTAPP automation systems which it plans to install over the next 45 days.

Recently, the company entered a multifaceted joint venture with Singlepoint Inc. (OTC:SING) According to Smart Cannabis Vice President Don Smith, "In addition to the advanced automation control of greenhouse ecosystems, one of the goals with Singlepoint is to program in data collection and basic bitcoin blockchain transaction technology to allow cultivators to extend their control capabilities to include transactions within our SMARTAPP."

Smith added, "We are also pursuing conversations with a number of agriculture companies to white

label/OEM the SMARTAPP for commercial and consumer gardening applications that would benefit from mobile yet robust automation and control systems. Whether you have a backyard greenhouse, or a commercial food cultivation business, we believe our SMARTAPP can fill a product niche somewhere in that control spectrum". According to Agrilyst, the marketplace for agriculture remote control systems is expected to generate over \$21 billion annually in the U.S., as data is critical in helping cultivators reduce costs and refine their systems to increase productivity based upon the collection of historical data, and real time monitoring and control.
