

A New Desktop Tool Transfers Photos from smart phone to PC in a Blink

A new freeware that allows smart phone users to scan a unique QR-code using standard iPhone camera and transfer images to that PC via the Wi-Fi network.

XI'AN, SHAANXI, CHINA, January 13, 2018 /EINPresswire.com/ -- ScanTransfer.net today releases the new desktop application product ScanTransfer, which offers probably the simplest way to transfer any media from a smart phone to a desktop PC. There are multiple ways to copy photos from a smart phone to a PC: sending via e-mail, sharing in a social network, wired connection to a PC and others. But every option requires some preliminary configuration and is not always as straightforward as users anticipate.

ScanTransfer Screenshot

Once run on the PC, the application displays a uniquely generated QR-code on the screen and asks the user to scan it using the smart phone. Then, the application transparently creates a local network between the PC and the smart phone and hence allows effortless transferring of video and image files to the PC.

Importantly, the QR-code shown by ScanTransfer can be read with a standard camera app of iPhone or Android Chrome browser as well as using Facebook or Twitter, no third party QR-code readers are required. In other words, copying files to a PC from a smart phone is a matter of scanning just one QR-code now.

Aside from being fast and straightforward, moving photos and videos using ScanTransfer is also safe and wireless, because the data are transferred by air using the secure local Wi-Fi network. The tool also supports multiple connected smart phones and therefore can act like a hub of a sort where media from multiple connected smart phones are stored.

Pricing and availability

ScanTransfer is free. It works on Windows 7 (32/64-bit) or higher and is compatible with iOS 9.0+ and Android Chrome browser ver. 59+.
