

Internet of Things Foundation certification now available.

The CCC is excited to announce the first and only official Internet of Things Foundation certification.

PALO ALTO, CALIFORNIA, UNITED STATES OF AMERICA, January 18, 2018 /EINPresswire.com/ -- Organizations willing to improve cost efficiency or developing completely new business models have learned the significant benefits of cloud computing and Internet of Things (IoT) technologies. Cloud and IoT are two very different technologies and their adoption is more and more omnipresent and experts are estimating about 30 billion objects connected with a market value that will reach \$7 trillion by 2020. Cloud computing and Internet of Things are now converging becoming a disruptive enabler of endless applications.

To ensure success we need to take into consideration many factors and the most important is the organizational skills gap. The CCC, working with leading technology organizations and cloud experts, is actively minimizing the skills gap through world-class certifications.

The CCC has just released the Internet of Thing Foundation certification

(<http://www.cloudcredential.org/certifications/iotff/>) for professionals that aim to understand one of the most critical components for the rapid digitization of businesses across the world.

Internet of Things Foundation certified individuals will have a great understanding of the concepts and terminology used by the professionals. They will learn to monetize the business opportunities, gaining a clear view of the IoT architecture and network components. The certification includes a deep analysis of the connections between Cloud Computing, Big Data, Social Media and IoT understanding the security risks and challenges using real-life scenarios and use cases.

About the [Cloud Credential Council®](#)

The Cloud Credential Council® is leading the way in defining global cloud training and certification standards. Together with its members the CCC defines cloud competencies, develops training and certification and is expanding its global partner ecosystem of partners, trainers and courseware providers. Organizations rely on the CCC to help accelerate successful cloud adoption by minimizing the skills gap related to the cloud of IT -- and business professionals. The Cloud Credential Council® is headquartered in Silicon Valley with representation across the world and can be found online at www.cloudcredential.org.
