

# IT Governance launches ISO 27001 classroom training courses in New York

NEW YORK, UNITED STATES, January 26, 2018 /EINPresswire.com/ -- IT Governance, the leading global provider of cybersecurity, risk management, and ISO 27001 expertise, is excited to announce the launch of its popular ISO 27001 classroom training courses in New York.

ISO 27001 is the best-practice standard for an information security management system (ISMS). The Standard encompasses people, processes, and technology – the three pillars of an organization’s robust information security posture.

ISO 27001 can help organizations achieve and demonstrate compliance with leading data security legislation, including the NYDFS Cybersecurity Regulation and the EU General Data Protection Regulation (GDPR). Additionally, ISO 27001 could provide safe harbor to the proposed New York Data Security bill proposed by Attorney General Eric T. Schneiderman.

Having led ISO 27001 implementations since the inception of the Standard, IT Governance is known as the global authority on ISO 27001, and has trained more than 7,000 people on ISO 27001 implementations and audits.

Now, for the first time, IT Governance’s [ISO 27001 Foundation and ISO 27001 Lead Implementer classroom training](#) courses will be held in New York.

The courses have been designed to equip attendees with the knowledge and skills required to plan, implement, maintain, and audit a best-practice ISMS in their organization.

Alan Calder, the founder and executive chairman of IT Governance, says: “We pride ourselves on our ability to serve an international customer base and deliver a broad range of integrated, high-quality solutions globally, while meeting the real-world needs of today’s organizations, directors, and practitioners.

“Our high-quality training courses have been designed to equip those at the forefront of data security with the specialist knowledge and skills to implement controls for the prevention of data breaches.”

The courses will be led by cybersecurity professional and lawyer William Gamble, one of the few lawyers who holds the advanced cybersecurity professional certification CompTIA® CASP. With more than 30 years of international regulatory practice in the US, the EU, China, and many other countries, William has an in-depth understanding of designs, management, and deployment of technology within the ISO 27001 framework.

IT Governance can also support organizations implementing ISO 27001 with a blend of tried and tested resources, such as books, toolkits, software, consultancy, penetration testing, and [DIY](#)

[packaged solutions.](#)
