IT Governance launches ISO 27001 webinar series to support organizations with ISMS implementation

NEW YORK, UNITED STATES, January 31, 2018 /EINPresswire.com/ -- IT Governance, the leading provider of information security and General Data Protection Regulation (GDPR) expertise and training, and a globally recognized authority on ISO 27001, is delighted to announce the launch of new webinars on ISO 27001 compliance.

As the number of cyber attacks continues to rise and data security laws and regulations become more stringent, businesses are under increasing pressure to protect their systems from cyber attacks, slip-ups, and data misuse. But the challenge of complying with multiple cybersecurity regulations is considerable. With little guidance on how to achieve a robust data security posture, organizations are struggling to find a comprehensive solution that can assure compliance.

ISO/IEC 27001:2013 (ISO 27001) is the international standard that describes best practice for an information security management system (ISMS). Achieving accredited certification to ISO 27001 demonstrates that your company is following information security best practice, and provides an independent, expert verification that information security is being managed in line with international best practice and business objectives.

IT Governance's free new webinars will share valuable insight into information security problem-solving. The first webinar aims to provide an overview of the current cybersecurity landscape and the latest data protection laws, and to highlight how an ISMS can help create the best strategies to mitigate breaches and meet even the most stringent of compliance standards.

Alan Calder, the founder and executive chairman of IT Governance, said: "New York financial organizations can not only meet the New York State Department of Financial Services (NYDFS) requirements but also ensure they are prepared in an ever-changing cybersecurity landscape by implementing ISO 27001, the internationally recognized information security management standard.

"The aim of our new ISO 27001 webinars is to introduce the Standard and its implementation step by step, as well as to prepare organizations for their toughest data security challenges yet."

The first webinar, How to overcome your data security compliance challenges, goes live on February 15 at 10:00 am (EST)/1:00 pm (PST). It will be followed by:

- How to implement an information security management system

- Conducting a cybersecurity risk assessment
- Assessing compliance: the ISO 27001 ISMS internal audit
