

Bitcoiin B2G announces Ethereum-based Blockchain Token Platform

B2G's platform supports token mining, a trading platform, and wallets. Thus allowing mining, trading, and buy-and-hold earning strategies.

HONG KONG, CHINA, February 8, 2018 /EINPresswire.com/ -- Bitcoiin.com is pleased to follow up the announcement of its forthcoming [Initial Coin Offering \(ICO\)](#), blockchain-based [BITCOIIN \(B2G\)](#). This new second-generation blockchain technology, based on the open-source Ethereum blockchain distributed computing platform, ensures both speed and security in the execution of cryptocurrency buy and sell transactions.

Modern blockchain technology is crucial, since blockchain speed functionality governs buy/sell execution speed, and also provides security. Since everyone

participating in the ecosystem sees the blockchain as it grows, nobody can falsify transactions. This is possible only with extremely-powerful computer arrays, called "mining rigs."

Ethereum's blockchain technology was developed for everyone to use, not just the ether token. This blockchain algorithm works like the bitcoin blockchain – but in a second-generation iteration. The Ethereum blockchain was designed to apply to applications beyond payments. This blockchain technology works as a general-purpose programmable ledger, adding functionality beyond the original bitcoin blockchain. The open-source Ethereum blockchain supports (1) a Turing-complete programming language and 2) "rich statefulness." That means the algorithm can compute anything computable, given enough resources. And the software's "rich statefulness" allows the distributed ledger to remember journal entries at a blockchain level.

This technology is the best way to engineer a fast, safe, distributed blockchain ledger. And that ability makes B2G's blockchain backbone a second-generation technology.

So why not use the best, most up-to-date, safest, fastest and most-transparent blockchain technology available?

As such, B2G offers an opportunity not seen since the original bitcoin offering in 2009 – a fresh chance to catch the wave, a chance for ordinary people around the world to participate in an Initial Coin Offering, with a modest investment and the possibility of excellent, maybe even fabulous returns.

Ethereum blockchain technology works as a general-purpose programmable ledger, adding functionality beyond the original bitcoin blockchain.

B2G envisions a more-comprehensive platform. That's why our platform supports token mining, a trading platform, and wallets. Thus allowing mining, trading, and buy-and-hold earning strategies.

Bitcoiin (B2G) is offering a chance to participate in crowdfunding its initial soft-cap \$75,000,000 USD start-up fund. Fund-raising will continue until a hard cap of \$250,000,000 USD is raised. Then the ICO window will close. Fund-raising has already commenced, with at least \$12,000,000 USD already on deposit.

This unique opportunity is open now.
