and is anticipated to grow at a CAGR of 26.9% during the forecast period.

Anti-drone is used for neutralization and disruption of unmanned aerial vehicles or unmanned aircraft systems. Anti-drones are used against hostile airborne surveillance, terrorist attacks, and other malicious activities. Anti-drones offer protection to sensitive areas such as government buildings, border security, airports, military facilities, commercial locations. Anti-drones use sensors, radars, analyzers, surveillance systems, jammers, and counter drone lasers for detecting, tracking, and disrupting operations of UAVs.

There has been an increasing demand of anti-drones, especially in defense and government sectors. The rising cases of security breaches by unidentified drones have accelerated the adoption of anti-drones. The increasing incidences of terrorism, border disputes, and civil wars have compelled the use of anti-drones. Governments are significantly investing in anti-drones for protection of citizens as well as resources. The growing demand from emerging economies, and technological advancements would provide growth opportunities in the coming years.
