

AN INNOVATIVE HEALTHCARE SERVICE PROVIDER SECURES IT'S APPLICATIONS ON AWS CLOUD USING AVOCADO SECURITY PLATFORM

MILPITAS, CA, UNITED STATES, February 8, 2018 /EINPresswire.com/ -- Avocado Systems, the leader in autonomous application security, segmentation and compliance, announces the adoption of Avocado's Security Platform by AptusCare to secure AptusCare's applications on AWS's cloud.

AptusCare's CEO Rishi Shah said "We wanted a solution that could provide security with negligible involvement from our team. [Avocado Security Platform](#) secured our applications hosted on AWS and provided full support without buying expensive security appliances".

As companies increasingly migrate applications to public clouds, security, compliance, and costs are "top of mind" concerns. Avocado Systems employs innovative, deterministic, autonomous segmentation technology to secure applications in cloud and data center environments. It prevents lateral movement of threats, such as [zero-day attacks](#) that have penetrated perimeter defenses. The Avocado Security Platform is fully optimized to keep the customer's migration path smooth while helping them meet compliance requirements for PCI, PII, [HIPAA](#), and others so they can continue to focus on their business goals.

Avocado Systems also announces that USAF veteran Michael Hodge is joining as their new Vice President of Federal. Mike is an experienced aerospace and technology senior executive (retired USAF Colonel) with an established track record of developing new markets, creating enduring customer loyalty and thriving in challenging environments.

"The Avocado Systems team is very excited to have Mike on board. He brings a unique blend of federal and commercial business to our team as we continue to expand our presence in enterprise and federal markets" said Keshav Kamble, CEO of Avocado Systems.

"I was looking for an innovative company where I could contribute to both its growth and culture. After numerous engagements with many suitors, the sense of teamwork and excitement from Avocado's leadership outshone all the others. I was delighted with the offer to work with Avocado and look forward to the exciting opportunities in our future." said Mike Hodge.

Avocado Security Platform's holistic approach protects any type of applications running on bare-metal, virtualized, containerized and server-less architectures such as AWS Lambda. For more information, please visit www.avocadosystems.net.

About Avocado Systems

Founded in 2015 and headquartered in Milpitas, CA, Avocado Systems is a leader in application security, segmentation & compliance. Creating autonomous applications segments without requiring any policies, it can stop lateral movement of the threats, such as zero-day, APTs, SQL-Injection, Malware etc. All security functions such as Next-Generation Firewalls, IDS, IPS, etc. are incorporated

into the plugins for distributed and scale-out security. Applications and data can be secured quickly without requiring any code modification, re-compilation or re-linking <http://www.avocadosystems.net>
