ICT Investment: Energy Sector

The energy sector (oil and gas companies) has been the biggest sector in terms of dollar value and it currently contributes a significant amount towards the national GDP of any country. However, plummeting oil prices and mounting climatic concerns have pushed the sector to look for advanced technological solutions in order to achieve sustainable growth.

Therefore, ICT vendors offering products and services in these domains clearly have good growth opportunities in this market.

Major Players Cover in the report:

ADP LLC

Amazon Web Services

Apple

AsiaInfo

AT&T

Cisco Systems

Dell EMC

Hewlett Packard Enterprise

Informatica LLC

IBM

Microsoft

The major highlights of the reports:

- Allocation across the core elements of IT spend, including hardware, software, services, communications, and consulting.
- Distribution of ICT money in areas such as the networks, applications, service desk, and data centers
- Which ICT functions energy companies are interested in outsourcing
- Energy companies' investment priorities based on their budget allocations across core technology categories such as business intelligence, enterprise applications, IoT, and cloud computing
- Factors that are influencing energy companies' investments in each technology category
- How energy companies' IT budgets are currently allocated across various segments within a technology category
- Energy companies' distribution of their ICT budget across various segments within a technology category
- Vendor satisfaction ratings for various core and advanced technology categories
- Insight into energy companies' preferred buying approaches
- Business and IT objectives that energy companies are looking to achieve through their IT investment strategies
- Factors that are influencing energy companies' decisions to select an ICT provider

Scope of the Report:

Approximately 61% of respondents are planning to increase their total ICT budget in 2017, by leveraging technology advancements to improve business functions and reduce cost to subdue the impact of the ongoing decline in oil prices that is expected to have long-term effects on the industry.

- The survey finds that energy companies are planning to allocate 35% and 34% of their cloud computing budget to software as a service (SaaS) and infrastructure as a service (IaaS) in 2017 respectively.
 - For 55% of enterprises in the energy sector, the decision to purchase cloud solutions is taken solely by the IT department with the dedicated aim of achieving process transformation in their existing business operations.
