

Cary Skin Center Celebrates 20 Years Of Skin Cancer Treatment In North Carolina

Practice Continues Growth Expansion In the Pinehurst, N.C. Area

PINEHURST, NORTH CAROLINA, USA, February 22, 2018 /EINPresswire.com/ -- This month The [Cary Skin Center](#) is celebrating 20 years as a medical practice. The practice – one of the North Carolina's largest Mohs surgery groups – is still growing and expanding. The practice added two more physicians and a physician assistant to its staff and added additional staff to their office in Pinehurst, N.C.

The practice is celebrating its 20th year with a huge gala event for the referring physician colleagues on Wednesday, March 14 from 5:30 to 7:30 pm at Cary Skin Center Pinehurst located at 5 Regional Cir Suite C, Pinehurst, NC 28374. The practice will be serving sumptuous hors d'oeuvres and marvelous wines for their physician visitors enjoyment and the opportunity to meet the two exceptionally trained and experienced Mohs surgeons that joined Cary Skin Center this year as well as providing hostess guided tours of our newly up-fitted facility.

The Cary Skin Center began in 1998 when Dr. Clark established the Cary Skin Center, a state-of-the-art outpatient surgical center specializing in Mohs Micrographic Surgery for the removal of skin

“

Our Mohs surgeons and staff focus on providing the most advanced surgical treatments and the practice's doctors are extensively trained in surgical reconstruction.”

Robert E. Clark, MD, PhD

cancer. Dr. Flynn joined the Cary Skin Center in 2001 and together they have successfully treated countless patients in the Triangle and surrounding areas. We now welcome Dr. Ayli and Dr. Ingraffea to the clinical staff at Cary Skin Center. Because Mohs surgery is a highly complex and sophisticated surgical method, it requires extensive training. Our doctors have completed intensive training programs, including complex surgical cases and advanced reconstructions, to become Fellows of the American College of Mohs Surgery. In addition, they offer over 62 years of combined Mohs surgery experience.

“The physicians and staff of Cary Skin Center seek to provide the highest quality of healthcare to our patients. We pledge compassionate, timely, and confidential care,” said Dr. Clark.

Cary Skin Center Physicians

“The face of medicine is changing all the time,” said Dr. Clark. “Our Mohs surgeons and staff focus on providing the most advanced surgical treatments and the practice’s doctors are extensively trained in surgical reconstruction. This includes basic closures, and more complicated skin flaps and skin grafts. They perform hundreds of these procedures each year. The goal is to provide the best possible cosmetic result after the removal of skin cancer.”

The Cary Skin Center is a skin cancer treatment center. Mohs micrographic surgery was developed by Frederic E. Mohs, MD over 50 years ago, and it continues to be the most advanced and effective treatment procedure available for skin cancer. The goal of the procedure is to remove the skin cancer completely while minimizing the removal of uninvolved healthy tissue. It is performed under local anesthesia on an out-patient basis.

For decades, Mohs micrographic surgery has proven effective in removing skin cancer by combining the surgical removal of cancer with the immediate microscopic examination of the tumor and underlying diseased tissue. This process allows the surgeon to see beyond the visible disease and precisely identify and remove the entire tumor. Mohs surgery traces the path of the tumor cells using two key tools: a precise map of the surgical site and a microscope.

The Cary Skin Center is conveniently located on the corner NC Highway 55 and High House/Green Level Road in Cary, NC. Our Pinehurst office is located at 5 Regional Circle, Suite C in Pinehurst, NC. We offer free on-site parking with easily accessible patient drop-off, Wi-Fi and comfortable patient lobby.
