

# Winnov Announces Command Center 2.3, the Latest Version of Its Deployment Monitoring and Management Software

*Command Center 2.3 makes management of Cbox recorders easier and deeper partner CMS integrations provide enhanced live streaming and 360-degree VOD experiences*

SANTA CLARA, CA, USA, March 8, 2018 /EINPresswire.com/ -- Winnov announces the latest version of [Command Center](#), its monitoring and control application for [Cbox](#) recorders. Command Center 2.3 features notable improvements to the user interface for even easier navigation and recorder management. Additionally, deeper integration with its content management system (CMS) partner, Kaltura, will provide immersive 360-degree VOD and enhanced live streaming experiences for users.

With the latest release, Command Center 2.3 showcases a new and comprehensive dashboard allowing users to more easily monitor and control their video capture and streaming deployments. AV input sources, storage status, configurations, and recording activities of Cbox appliances connected to the network can be quickly and centrally managed from a single interface.

Along with a new main dashboard, the revamped layout of the user interface simplifies access to various menus within Command Center. Administrators can now quickly navigate among different menus to check on Cbox recorder status, schedule recordings and live streams, view publishing activities, manage users, review the latest notifications, and more.

Other updates in this software release include enhancements to the Kaltura plug-in and publisher. The enhanced plug-in enables live broadcasters to synchronize hi-res slides along with the live video stream. Users can now take advantage of Kaltura's interactive player features to customize dual-source viewing experiences during live streams.

Additionally, the latest Kaltura publisher allows for 360-degree recordings to be captured and auto-uploaded from Cbox recorders into Kaltura's platform and displayed in their 360° player. Kaltura users can now fully immerse themselves in 360-degree video experiences as if they were there.

Visit Winnov during Enterprise Connect at booth #1938. Winnov will demonstrate its new IP video capture technology combined with Command Center 2.3 to extend remote video capture and Cbox deployment monitoring and management.

#### About Winnov

Winnov is a technology leader in video capture & streaming and maker of Cbox – the AV platform that evolves with customer needs. Cbox solutions provide organizations with a cost-effective way to easily capture and share rich media experiences. Fortune 500 companies, leading universities, training organizations, and government agencies rely on Cbox to create the most engaging live and on-demand video experiences for the web and mobile devices.
