The full report of global TB market is available <https://www.omrglobal.com/industry-reports/tuberculosis-diagnosis-and-treatment-market/>

“Reducing import duties on tuberculosis diagnostic equipment is predicted to go a long way and also making diagnostic tests more affordable across the globe.”

Tuberculosis is the leading cause of death from a single infectious agent across the globe. The present and future risk that TB poses to human health is mainly a consequence of the neglect of TB research field over the past several decades. However, to reverse this neglect and ending the tuberculosis disease by 2030, the United Nations Sustainable Development Goals (SDGs) and WHO End TB Strategy are taking decisive action with the support of all countries and stakeholders to increase TB research and innovation. Funding for research and development in the field of tuberculosis diagnosis and treatment will offer a huge opportunity for the global tuberculosis diagnosis and treatment market across the globe. Funding for R&D has been increasing significantly over past levels, and other institutional barriers to research and development have been resolved. The End TB Strategy specifies that new advanced development must be introduced by 2025 in order to reach the 2030 targets of a 90% reduction in TB deaths and 80% reduction in TB incidence compared with 2015 levels. This goal will significantly contribute to the growth of the global market.

On the basis of the geography, TB diagnosis and treatment market has been segmented into North America, Asia Pacific, Europe and Rest of the World. APAC has been predicted to dominate the global tuberculosis market and will be the fastest growing region during the forecast period. The major cause of this dominance is the rising incidence and prevalence of tuberculosis in the

region along with increasing government initiatives. As per World Health Organization, the largest number of new TB cases was recorded in Asia, accounting about 45% of new cases in the region.

Companies profiled in the report:

- Abbott Laboratories
- Akonni Biosystems, Inc.
- Alere, Inc.
- Becton Dickinson and Co.
- Bio – Synth Inc.
- Biomérieux SA
- Cepheid Inc
