Rising awareness among women related to health issues in developing regions is propelling the women health therapeutic market”

OMR Analyst

The rising incidences of chronic disorders in women is one of the most significant factors contributing to the growth of the women health therapeutics market. Breast cancer is one of the severe health issue faced by women globally. Breast cancer is the most commonly diagnosed cancer among American women. In 2017, it's estimated that around 30% of newly diagnosed cancers in women were breast cancers.

According to breast cancer organization, estimate 266,000 new breast cancer cases are anticipated to diagnosed in women in the US in 2018. About 50,000 women in the US are expected to lose their lives in 2018 from breast cancer. Breast cancer is typically detected either during a [screening examination](#), before symptoms have developed, or after a woman notices a lump. Treatment usually involves either breast biopsy or mastectomy. Mammography, breast cancer tumor marker tests, blood chemistry and blood cells count tests are some of the major tests used to diagnose the breast cancer. The rising number of breast cancer disease in women augmenting the growth of women health therapeutic across the globe.

Geographically, the market is segmented into North America, Europe, APAC and rest of the world. North America is expected to hold largest market share in the global market owing to the growing focus towards women health and high prevalence of chronic disorders such as breast cancer and lung cancer. In 2017, approximately 40,610 women died due to breast cancer in the US. The rapidly developing economies of APAC are projected to witness the highest growth rate due to the growing awareness about the diversified treatment options for women health issues coupled with the rising prevalence of urological disorders within the regional countries.
