PUNE, INDIA, March 12, 2018 /EINPresswire.com/ -- Summary

WiseGuyReports.com adds "Ni-MH Battery Market 2018 Global Analysis, Growth, Trends and Opportunities Research Report Forecasting to 2023" reports to its database.

This report provides in depth study of "Ni-MH Battery Market" using SWOT analysis i.e. Strength, Weakness, Opportunities and Threat to the organization. The Ni-MH Battery Market report also provides an in-depth survey of key players in the market which is based on the various objectives of an organization such as profiling, the product outline, the quantity of production, required raw material, and the financial health of the organization.

The active components of a rechargeable NiMH battery in the charged state consist of nickel hydroxide (NiOOH) in the positive electrode and a hydrogen storing metal alloy (MH) in the negative electrode as well as an alkaline electrolyte. The advantage compared to rechargeable NiCd batteries is the higher energy density per volume and weight. The substitution of cadmium is mostly used to create a positive image but in view of the recycling situation today this does not offer any lasting benefits. In several applications rechargeable NiMH batteries have replaced the rechargeable NiCd batteries. The disadvantages are a higher sensitivity to high temperature, leading eventually to shorter service life (as in the case of high rate charge for power tools for example), greater temperature dependence and a higher cost.

This report includes market status and forecast of global and major regions, with introduction of vendors, regions, product types and end industries; and this report counts product types and end industries in global and major regions.
