

A New Way to Conceive a Boy or Girl: Gender Selection is done by Woman.

Women have alternating boy-girl specific menstrual cycles. To get a boy, try in boy cycle. To get a girl, try in girl cycle. Please don't just keep trying.

LIVONIA, MICHIGAN, UNITED STATES, March 15, 2018 /EINPresswire.com/ -- A New Way to Conceive a Boy or Girl: Gender Selection is done by Woman.

Congratulations couples!

Now you have full control on conceiving a boy or girl whenever you want. Don't just keep trying.

Every couple dreams of having small and balanced 1-boy 1-girl family. When they get two babies of same gender, they start looking for ways to balance their families. According to us, if couples use our services from very beginning, a happy and balanced families can be effectively created resulting in communities with reduced spousal / domestic abuse.

Mother & Child

“

If one has two babies of same gender, the chances of third baby to be of same gender are actually higher. The ONLY ONE system that can break that gridlock is PreGender Preconception test.”

Kuldeep Verma

Since there was no logical method available till now, numerous companies cashed on the desperation of women by selling baseless and failed ideas like Dr. Shettles hypothesis on lighter / heavier sperms affecting gender selection, boy or girl conceiving nutraceutical kits, gender diets, douches, charts and calendars etc. None of these have any basis.

The good news: Now there's a way.

In 2006, we discovered that women have alternating boy-girl specific menstrual cycles. Therefore, to get a boy, one must conceive in a boy cycle and to get a girl, do in girl cycle. This alternating gender specificity is due to release of alternating ratio of male to female hormones in uterus. Women have around 200 active eggs for conceiving boys and the same number for conceiving girls. So the effective gender planning involves management of conception in appropriate cycles. That is what PreGender Preconception test does.

Since gender selection is genetically controlled, eating or drinking anything for a short period of time

is not going to work. If anyone promises you to balance your family without testing anything from you, he / she is lying.

The hormonal environments in the uterus can be determined by testing two mid-cycle urine samples collected for two consecutive months in separate bottles and shipping to our laboratory. After testing them, we keep on guiding by sending conception plans via email as to in which cycle to try and in which to avoid at no additional cost. We can also find the gender of baby as soon as one gets a positive pregnancy test. Ours is the earliest gender diagnostic test in the world.

All of this can be better understood through following [graph](#):

We offer two types of urine tests: 1) PreGender Preconception Test, to help conceive a baby of specific gender and 2) FirstGender Post-conception Test, to evaluate the gender of the baby from day-1. Both are natural, safe, simple urine-based tests. Urine samples are collected by customers at home and mailed through any courier (UPS, FEDEX or DHL) to the lab in Livonia, Michigan, USA. It is legal to ship urine samples across international borders under classification, "Exempt Human Specimen" and the older the sample at RT, the better for these tests. No preservative is needed.

The success rate of PreGender Preconception Test is 92%. That means if 100 couples conceive in, say a boy phase, 92 will get boys and 8 can get girls. This high success rate leads us to believe that the uterus may be selecting X & Y sperms for conception depending upon the type of cycle she is in. In other words, uterus selects the gender of baby. We have nearly 300 success stories. This unique technology is protected by four patents.

For proof, customers are requested to see our results at Live Charts at www.urobiologics.com.

How to get your dream baby?

Name your baby first. Participate in our Live Charts at our website where we display all the results in advance to show how couples are getting their desired babies. Get two mid-cycle urine samples tested from us to know from where to start. Thereafter, we email you conception plans in every

This pictorial shows how alternating hormonal environment can help you plan for a boy or girl.

Cycle 1
After testing two samples, suppose cycle 1 shows a BOY PHASE

Cycle 2
Cycle 2 would be a GIRL PHASE, good for conceiving a girl

Cycle 3
Cycle 3 would be a BOY PHASE again, good for conceiving a boy

If conception occurs here, this boy phase is locked for 9 months and the existing hormonal pattern is inherited by that baby. Also, you stop alternating, just like you stop menstruating. **This is the new medical discovery by us.** The same is true for girls.

Some kits can detect pregnancy six days before the expected period date. Our FirstGender Test can detect the gender of the baby from that day onward and there is 92% chance that it would be a boy because conception occurred in a boy phase.
