Chaitanya Cherukuri to set up computer science weekend

Advances in technology and computer science are changing the way in which we all live our lives.

SAN MARCOS, TEXAS, UNITED STATES, March 16, 2018 /EINPresswire.com/ -- "We need to put a real emphasis on computer science education," says Texas-based Chaitanya Cherukuri. He continues, "We cannot underestimate the critical importance of computing in all of our futures."

Keen to offer an insight into the world of computer science, for generations both young and old, Cherukuri has set about organizing a computer science weekend for those in the San Marcos area.

Cherukuri's computer science weekend will be offered to anyone wishing to attend, and whatever their level of understanding as it pertains to the subject at hand.

Free of charge, places will be limited, although Cherukuri hopes to accommodate as many people as possible.

"It's something which I've found that many people are keen to learn more about," says Cherukuri. "Some are keen to learn in great depth, while others just wish to gain a better understanding of computer science in general."

Cherukuri hopes that by hosting the weekend, he can tempt interested parties into future—or further—computer science education, training, and—eventually—successful and highly-rewarding employment as a result.

"While the younger generation is embracing computer science, it's not something which older persons should necessarily discount, overlook, or ignore," Chaitanya Cherukuri adds.

"There's scope for people, later in their careers, and indeed later in their lives, to return to education if something like computer science interests them, or can further their employment opportunities or otherwise improve their lives."

Computer science, by definition, is the study of the theory, experimentation, and engineering which form the basis for the use and design of computers and computer systems, according to Wikipedia.

Areas of computer science include theoretical computer science, computer systems, and computer applications.

These areas can, in turn, include the likes of data structure and algorithms, computer architecture and engineering, and computer graphics and visualization respectively.

"There are lots of big words involved in describing computer science," explains Cherukuri, "but the upcoming event will explain everything in terminology which all in attendance can hopefully follow, whatever their starting level of knowledge."

He continues, "If I can turn even a small group of people towards the possibilities of education, further education, or a career in computer science, I'll consider the weekend a success!"

Details of Chaitanya Cherukuri's computer science weekend, open to interested parties in the San Marcos and broader Hays County areas, will be made available soon.
