Government taking initiatives for providing better access to healthcare services and raising awareness”

*OMR Analyst*

STDs are commonly spread by unprotected coitus, especially vaginal intercourse, anal sex or oral sex. More than 30 different parasites, bacteria and viruses can cause STDs. Bacterial STDs include chlamydia, gonorrhea, and syphilis. Viral STDs include HIV/AIDS, genital herpes, and genital warts among others. Parasitic STDs include trichomoniasis and so on. STD affects millions of people across the globe, many of which are not aware of the same. Government

organizations such as STD Surveillance Network (SSuN), Project Connect Health Systems Intervention (Project Connect), Gonococcal Isolate Surveillance Project (GISP) are taking initiatives to provide access to healthcare services, prevention strategies, and educate local public regarding STDs.

On the basis of geography, the market is segmented into North America, APAC, Europe and rest of the world. Currently, North America is dominating the market due to high awareness of the population regarding STDs, which has resulted in higher number of people getting screened and checked annually. Another reason for the North American to be a dominating region is the adoption of more novel technologies such as phone chips, dPCRs, rapid diagnostic kits and other new technologies. The North American market is expected to grow from \$3 billion in 2016 to \$4.9 Billion by 2022. The Asia Pacific is expected to show the highest growth particularly due to high prevalence of STDs and

increasing awareness. The APAC region generated revenues worth \$2.5 billion in 2016 and it is expected to grow to \$4.4 billion by 2022.

Company profiled in the report
