

End-users are demanding more. Give it to them! [Isomorphic's Release 12 is available for download].

Isomorphic Software – provider of the most advanced platform for building progressive web apps – just announced that Release 12 is available for download.

SAN FRANCISCO, CA, UNITED STATES, March 27, 2018

/EINPresswire.com/ -- More and more is being demanded of Enterprise end-users. To be able to deliver, they are in turn demanding better web applications to do their job. They want their web apps to look great, be loaded with productivity features, have no bugs, and to run at lightening speed on any desktop or mobile device. This obviously adds a lot to developer's already overflowing plates. But don't worry, it's totally doable ... with [Release 12](#) from [Isomorphic Software](#).

Build Better Web Applications. Faster.

End-users

No Compromise UI
Regardless of
Device

Dynamic properties | SASS templates | Microsoft surface/mixed input support | Show/hide icons on focus | Highlighting pending values | Frozen columns with vertical autosizing | Obsidian skin | Stratus skin | WebSockets Support in RTM | Tree picklists for SelectItem | TypeScript support | Selenium 3.0 support

 Isomorphic™
SOFTWARE

Release 12 from Isomorphic Software is available for download.

Isomorphic Software has delivered a lot of firsts: First ever Rich Internet Application (RIA); First ever OLAP data-cube interface in a browser based on AJAX RIA technology; First to allow visual application building inside the browser. And so the list goes on. With today's release, CTO Charles Kendrick wanted to deliver in three key areas:

“

With Release 12, developers AND end-users become highly-productive. It takes progressive web apps to the next level.”

*Charles Kendrick, CTO of
Isomorphic Software*

#1 Fastest development of High-quality, high-performance web applications

Isomorphic's [SmartClient](#) platform already allows developers to code an application once for the desktop, and have it automatically adapt for any device (smartphone, tablet, etc.) without necessitating that developers write any device specific code. This was probably the most significant developer productivity improvement that could be made, as there was no longer a need to create native apps. With Release 12, the first

goal was to help developers to deliver web applications faster and with higher quality. It therefore includes capabilities such as TypeScript support, Selenium 3.0 support and the general ability to set a property to a dynamic ruleScope value.

#2 Most productive end-users

Isomorphic Software's customers typically build complex enterprise web applications that handle

volume data at speed. Lightweight alternative platforms just don't deliver UI components with the depth and breadth of capabilities (e.g. excel-like capabilities in your web app), don't scale, and don't deliver the required performance. The second goal of Release 12 was to make end-users even more productive. End-user productivity tools like: tree picklists for SelectListItem, built-in Saved Search interface for grids, show/hide icons on focus for forms, and much more are included in Release 12.

#3 No-compromise UI - regardless of device

To deliver on this goal, Release 12 has - among numerous other features - two beautiful, contemporary new skins ('Obsidian' and 'Stratus'), SASS support for modifying skins, and Microsoft Surface support.

The screenshot displays a web application interface with a dark theme. At the top, a blue banner reads "Better Web Applications. Faster." Below this, there is a table with columns: Country, Governme... ^ 1, Continent ^ 2, and Flag. The table lists countries like China, 12, 45, Russia, South Kor..., and Indonesia. To the right of the table is a line chart titled "Revenue" showing data over time with multiple colored lines. Below the chart is a "Select a Color" section with a "Basic Colors" palette and a color wheel. At the bottom of the interface, there is a "Rating" slider set to 735, ranging from 1 to 1000. The Isomorphic Software logo is visible in the bottom right corner of the screenshot.

No compromise UI - regardless of device

Charles Kendrick, CTO of Isomorphic Software stated that, "with Release 12, developers AND end-users become highly-productive. It takes progressive web apps to the next level." We agree.
