

# Industry Innovator Leader Sureline Systems To Host Enterprise Cloud Migration Webinar

*Live Webinar to Feature Industry Veteran from Storage Switzerland*

SAN JOSE, CALIFORNIA, UNITED STATES, March 28, 2018 /EINPresswire.com/ -- [Sureline Systems](#), a leader in enterprise-class on-premises and cloud physical and virtual server migration and disaster recovery software solutions today announced the next in their series of live webinars to be held on Thursday April 12, 2018 at 12:30 p.m. EDT / 9:30 a.m. PDT.

The webinar, “Enterprise Cloud Migration – Four Challenges to Resolve” will feature renowned industry analyst George Crump, President and Founder, Storage Switzerland and George Symons, COO, Sureline Systems, Inc.

In this live webinar, the industry veterans will share their insights providing attendees the opportunity to learn how to overcome:

1. The Data vs. Bandwidth Challenge – high-speed network bandwidth is not enough
2. The Manual Migration of Hundreds of Workloads – automation is imperative
3. The “Start-All-Over” Problem – due to unreliable network connectivity
4. Keeping Sites In-Sync – intelligent utilization of limited bandwidth

## About SUREedge Migrator

SUREedge Migrator captures application consistent images from any physical or virtual server. These point-in-time images are then replicated using efficient deduplication, compression and encryption, to a local or remote site or Cloud. SUREedge Migrator includes a migration planner to develop an end-to-end plan to automate the overall migration process. The plan identifies which machines are to be migrated and when, and defines any interrelationships between servers that create complex applications. SUREedge leverages its automated transformation functionality to migrate from any source to any target, local or remote site or Cloud, where dissimilar hardware or operating

environments can be used at the source and target.

#### About SUREedge Disaster Recovery

SUREedge Disaster Recovery (DR) delivers enterprise-class DR with WAN-optimized active-active replication, global deduplications, compression, and encryption. With SUREedge DR, IT managers can securely and quickly protect all applications, operating systems, data, etc., replicating from any physical or virtual server to any target, Cloud or remote site. A central management console and agentless architecture lower operational expenditures (OpEx) for an efficient and cost-effective solution. SUREedge uses a snapshot when capturing a recovery point to ensure that when a failover occurs, a full consistent image is recovered. DR plans can be tested with no impact on the production environment to ensure confidence and speed of execution if a disaster should occur.

#### About Sureline Systems

Sureline's patented, award winning SUREedge® is a proven enterprise-class software solution for Cloud Migration, Cloud Disaster Recovery, Datacenter Consolidation and Application Mobility. SUREedge reduces risk through encrypted and efficient data transmission, and reliable transformation of the entire application, its data and interdependencies from source server to the target server virtualization or Cloud. It is easy-to-deploy and manage through a single UI, with automated discovery, no agents to install, and is completely non-disruptive. SUREedge is source and destination agnostic working to/from any physical server, any hypervisor (including hyperconverged infrastructures), any cloud, and any storage. Customers worldwide trust SUREedge to meet their workload migration, disaster recovery and application mobility objectives. Sureline is headquartered in San Jose, CA., and its products and services are available through a global network of VARs and technology service providers.
