

Human Growth Hormone Market 2018 Share, Trend, Segmentation and Forecast to 2022

Human Growth Hormone Pharmaceutical and Healthcare Analysis Information

PUNE, INDIA, March 29, 2018 /EINPresswire.com/ -- [Human growth hormone](#) is produced by the pituitary gland and it spurs growth in children and adults. It regulates body fluids, muscle and bone growth and fat metabolism of the body. Growth hormone is important for normal functioning in humans. The deficiency of growth hormone is termed as Growth Hormone Deficiency (GHD) and it can be tackled by administering intramuscular or subcutaneous GH injections on daily basis.

In the coming years, this disorder can be treated by various therapeutics which are currently in their final phase of development. This would change the complete market scenario because at present only daily agents are used to treat GHD. The global human growth hormone market is likely to see strong pipeline of drugs with increased research and development activities, which would spur innovation in the market.
