

TBG Security Introduces Incident Response Services to Address Critical Need to Prepare for Cyber Threats

With the sophistication of Advanced Persistent Threats (APT) posing new risks to enterprises, TBG Security today introduced Incident Response Services.

FRANKLIN, MA, UNITED STATES, April 24, 2018 /EINPresswire.com/ -- With the sophistication of Advanced Persistent Threats (APT) posing new risks to enterprises and governments, TBG Security a leading risk management solutions provider, today introduced TBG's Incident Response Services offering. The new portfolio of services, including incident response preparation, forensics, IR Discovery and IR tabletop exercises, are designed to rapidly assist an organization during an incident or breach and provide a methodical approach to help enable organizations to proactively prepare for, respond to, and mitigate APT.

According to the Verizon 2018 Data Breach Investigations Report, 68 % of breaches took months or longer to discover. In many cases, it's not even the organization itself that spots the breach—it's often a third party, like law enforcement or a partner. Worst of all, many breaches are spotted by customers. You don't need us to tell you how bad that would be for your brand reputation.

“

With TBG Security's services you're not paying for the privilege of having an organization waiting around to respond to an incident. We work year round to improve your response capabilities.”

Kevin Gorsline, COO

[TBG Security's Incident Response Services](#) are designed to help businesses prepare for, discover and respond to threats, in a methodical and repeatable approach designed specifically to reduce the risk of cyber incidents impacting and/or disrupting your business.

Kevin Gorsline, COO at TBG Security states: “While other organizations offer similar Incident Response Retainer services, with TBG Security's services you're not simply paying for the privilege of having an organization sitting around waiting to respond to an incident. TBG's IR services

are designed to continually help an organization improve their overall IR readiness posture.” With TBG's Incident Response Retainer your organization will be better prepared to deal with any security incident in the timeliest manner possible with the greatest chance of success.

TBG's Incident Response Services are derived from TBG's years of experience in handling real-time incidents and are structured to adapt to today's ever-changing threat landscape. Using a methodical approach to IR readiness, these services focus on protecting your assets, improving your IR visibility and overall readiness to respond to any cyber incident.

TBG's experienced cyber-defense professionals work with your team through all phases of a cyber incident.

Before an Incident

Preparation – TBG works closely with your team to gain a thorough understanding of the environment. We will work with key stakeholders in the process to fully verse our team in the technologies in place, along with the processes that exist for handling incidents when they occur. This is coupled with an understanding of how escalation occurs, who the players are and what their roles are. During this engagement TBG will work closely with your team to build an incident response plan and run books that are focused on forensic data collection and chain of custody.

During an incident

Analysis & Leadership – TBG can be called on during an active incident as a subject matter expert to help guide and advise the IR team during containment, eradication and recovery. TBG is you trusted partner during an incident and will be there to help lead your team thru the incident as needed.

Forensic Activity – TBG is ready and able to aid in forensic investigations as deemed necessary. The operational run books we put in place during the Preparation phase will guide the IR customer through the process of proper evidence collection, and chain of custody procedures. TBG will then take forensic materials off site to our lab for analysis and reporting and work with your team on remediation planning.

Incident Response Improvement

With our Incident Response plan, unlike other providers, you don't pay to have us sit on the bench and wait for an event to happen. On a quarterly basis we provide the following services.

Incident Response Discovery

During IR Discovery, TBG consultants will use automated and manual approaches to identify indicators of malicious activities to provide you with an awareness of the overall security posture of your computing environment and indicators your systems have been compromised. During a threat hunt, breach investigators and TBG consultants examine your computing environment, including workstations, laptops, servers, logs and network traffic. Using manual and automated tools, our experts identify threats including those that frequently bypass standard security controls, such as antivirus and intrusion detection tools. At the end of the hunt TBG will provide you with a detailed report of our findings and threats identified in your environment.

Tabletop Exercises

The Tabletop Exercise are designed to evaluate the tools, processes and expertise your organization uses to respond to cyber-attacks. Working with your team, TBG consultants will conduct a simulated real-world situation lead by a TBG facilitator, where your team can interact to events as they unfold in a classroom setting. Typically, the participants represent key areas that would be affected by an incident. This fully inclusive exercise provides critical feedback on your incident response strategies and areas of risk in a tabletop environment. At the end of the exercise TBG will provide a post-action

report with a timeline of events, detailed analysis of activities and strategic recommendations for improving detection, response, containment of the incident.
