Diagnostic Audiometer is a device used to evaluate hearing loss during an audiology test. Usually, it is an individual piece of hardware that delivers pure tones of controlled intensity to one ear at a time, to which a patient responds when they can hear the tone. Many modern devices can either be used alone or connected to a computer and integrated with hearing conservation databases. Audiometer has different types, depending upon the frequency range, range of acoustic output, mode of acoustic presentation, masking facility, procedures used, and types of acoustic stimuli. It is commonly used in hospitals, audiology centers and research communities.
