

# SIEMonster Version 3 SIEM Software Release

*SIEMonster to release Version 3 of SIEMonster Security Information and Event Management Software on May 1st.*

SAN FRANCISCO, CALIFORNIA, UNITED STATES OF AMERICA, April 26, 2018 /EINPresswire.com/ -- [SIEMonster](#) creators of Security Information and Event Management (SIEM) software for companies wanting to detect threats and risk in their organization today announced the release date of their latest edition SIEMonster Version 3. This new release will provide a mature Enterprise Security Information and Event Management (SIEM) to all sized companies around the world.

"It's the perfect day to release our latest SIEM software on SIEMonster's second birthday," said Chris Rock, CEO and founder of SIEMonster. "Since the initial release of SIEMonster, we have had over 100,000 downloads of our product this year alone. Companies, globally have told us what they want in a SIEM and we have delivered these features in our latest SIEMonster edition available for download 1st May. "

Happy 2nd Birthday SIEMonster

“

We have had over 100,000 downloads of our product this year alone. Companies, globally have told us what they want in a SIEM and we have delivered these features in our latest SIEMonster edition.”

*Chris Rock*

SIEMonster V3 includes Search Guards security modules after performing a partnership this month as well as, Palo Alto's Threat Intelligence Minemeld suite, 2 Factor authentication and a range of other new features. SIEMonster is available as a free Community edition, a Premium corporate edition and a Multi-tenancy Edition for Managed Security Service Providers.

"It's been a massive two years for us," said Dez Rock SIEMonster Advisor. "In under two years, our product has become a direct competitor in the SIEM space all around the world, with companies like HP, Zenefits, BlueScope and Online using our products. We now look forward to

releasing the next generation of Micro SIEM's a new product we call Redback, first in the range that will serve the home market, small business and big business for the IoT space. We all know we have to protect our computers, and now there is a growing need to stay safe on all their Internet-connected devices and appliances. Redback came from a glaring need we saw in the market. When asked why it was called Redback Dez explained: "Named after a spider, it's small, it's Australian and it packs a mighty punch."

SIEMonster new Micro-SIEM Redback was recently chosen by CSO as one of the hottest products during the RSA conference in San Francisco last week.

## About SIEMonster

SIEMonster is the brainchild of a team of professional hackers with over 20 years' experience, hacking into companies around the world. Using this experience, SIEMonster has built modern security SIEM tools for companies wanting to detect threats and risks to their organization. SIEMonster is an Enterprise-grade Security Information and Event Management (SIEM), built on scalable, open source components.

It all began when a global manufacturer detailed the frustrations at the exorbitant licensing costs of commercial SIEM products and asked whether we could build a SIEM to minimize these annual license fees. We thought that was a great idea, and set out to create a SIEM that we, as hackers, would also use. SIEMonster now provides SIEM products for Managed Security Providers (MSSP's) and Security Professionals around the world.
