PUNE, MAHARASHTRA, INDIA, May 22, 2018 /EINPresswire.com/ -- Global eFuel Industry

New Study on “2018-2023 eFuel Market Global Key Player, Demand, Growth, Opportunities and Analysis Forecast” added to Wise Guy Reports Database

Conservation of non-renewable resources is a major concern nowadays. To meet the increasing energy demand with least damage to the environment the government and researchers are looking for alternatives like E-Fuels. E-fuel is being produced by using carbon dioxide (CO<sub>2</sub>) instead of fossils buried beneath the earth surface, this ensures that there is no addition of CO<sub>2</sub> in the atmosphere. The growth influencers for E fuel market are increasing demand for automobiles, scarcity of conventional sources & the growing scope of renewable energy. There are subsidies and incentives offered by the government which can boost the demand of this market.

High initial investment is one of the major restraining factors for the growth of E-fuel technology. The E fuel production is a multistage process which involves extraction of CO<sub>2</sub> and Electrolysis. Execution of these processes requires large manufacturing setup, incurs a high cost. Also, lack of infrastructure for refueling is a major constraint for this market. Major opportunities in the E fuel technology market is increasing investment by government, development of cost-effective fuel technology.
