Growing consumer concerns regarding health, the environment, and animal welfare, along with their willingness to pay premium price for healthy food is fuelling the growth of organic soybean in developing nations. Moreover, the presence of organic food & beverages has increased over the years in conventional food supply chains due to the development of private labels. Also, government authorities, NGOs and farmer organizations in developing countries are promoting organic farming by financial support, market information, and trends in organic food market. Developing countries are providing subsidies to small farmers for organic farming. NGOs, farmer organizations, traders are conducting training programs to encourage farmers for adopting organic farming. Traditional farming, conventional farming equipment and practices have reached their limits of effectiveness to increase agricultural yield. With monumental challenges in form of increasing food demand coupled with increasing food safety concern and growing environmental and animal health concern, it becomes imperative to address such problems in agricultural sector and take necessary measures to improve the quantity and quality of agricultural produce. Research and development will lead to development of new product to improve the quality of the product and improve its functionality by including better formulation.

Regional Analysis:

The Global Organic soybean Market is segmented into North America, Latin America, Europe, Asia Pacific and Middle East & Africa. Among the region, Asia Pacific region is estimated to account for the highest market proportion in the year of 2017 and it is expected to continue throughout the forecast period of 2017-2023. Among the Asia Pacific countries, China is holding 76% of market proportion in the Asia Pacific organic soybean market and it is estimated to register a healthy CAGR of 11.74% during the forecast period of 2016-2022.
