Of these proteins, albumin accounts highest share that is 60%, and immunoglobulin with 15% share. These two are the most common proteins extracted to treat various disease.

Blood plasma is important because it fights off foreign substances that invade the body and transport nutrients and water. North America is the largest market for blood plasma as it has the most advanced infrastructure which has helped in increasing plasma collection over the time. However, emerging economies like that of China have showed huge potential with increased imports of Albumin.
