

Plasma Pen Pro (PPP) Fibroblast Training and Certification Program Goes International To Gold Coast, Australia

Plasma Pen Pro (PPP) Fibroblast is the newest technology in the fight against aging and the wrinkles that age us. This technology is now coming to Australia.

GOLD COAST, AUSTRALIA, June 5, 2018 /EINPresswire.com/ -- The beauty industry must always come up with new potions and lotions to continue the fight against aging. Every once in a while there is a procedure or product that comes out, such as Botox, that works without question. Today, we are proud to offer the newest procedure that can remove or reduce fine lines and wrinkles, and remove pigmentation, warts, skin tags, moles and more. The procedure is called Plasma Fibroblast Skin Treatments, and [Plasma Pen Pro \(PPP\)](#) are one of the leaders in the Plasma industry who are offering training and certification in Plasma treatments.

Plasma Pen Pro is pleased to announce their [Plasma Pen Training and Certification Program](#) in [Gold Coast, Australia](#) on July 5-6 and July 8-9. The program has been well received and so popular that new dates had to be added to be able to house all the interested technicians wanting to learn this new technique.

Plasma Pen Pro (PPP) is the newest machine that harnesses the power of plasma, a fourth state matter (Solid, Liquid, Gas, Plasma), to help reduce or eliminate certain skin conditions and concerns, such as wrinkles, fine lines, moles, skin tags, etc.

Through the process of ionization, our PPP unit is able to create an electric charge, or ARC. This arc is focused on a target on the surface of the skin, which causes a controlled burn, which dissipates heat throughout the area being targeted. This technique causes the elimination of moles, skin tags and pigmentation, etc. Moreover, the dissipation of heat throughout the skin being targeted causes your body to send fibroblasts to the area and lay down collagen and elastin fibers, which promotes plumping and tightening of the skin.

PPP is the newest skin treatment in the beauty industry and is non-invasive, non-surgical, with no

scalpel or surgical cutting tools required. Clients can expect no bruising, no bleeding, very limited downtime and the procedure is virtually painless.

Students that take our PPP training and certification program will be able to work on fine lines, crows feet, eyebrow ptosis, nasal labial folds, marionette lines, smokers lines, drooping or loose skin, moles, skin tags, age spots, SMP blowouts, PMU removal, and more.

The folks at Plasma Pen Pro have over 35 years of combined experience in the beauty industry, and have always been on the cutting edge of the latest skin treatment techniques and procedures. They have worked in a variety of settings all over the country, including spas, medical spas, medical centres, and opening their own Medical Spas, Scalp Micropigmentation Center's, and Plasma Treatment Centers.

Plasma Pen Pro (PPP) has completed all the searching and testing for the best possible machine for their students. Although Plasma Skin Treatments are relatively new, for aesthetics purposes, there are only a handful of machines that have just the right amount of power to conduct a proper Plasma Skin Treatment procedure. Not all machines are created equally, and you will find out during our PPP Training Program, what makes a good Plasma Pen Machine, and what the minimum standards requirements are.
