## [Sulfur Market 2018](#)

Sulfur is a non-metallic, multivalent, and tasteless naturally occurring element. It is usually lemon yellowish in color and found in various mineral springs, water bodies, iron pyrites, gypsum, zinc blende, Epsom salts, barites, and other minerals and ores. Sulfate and sulfide minerals are the most available sources of sulfur on Earth. Apart from mining operations, sulfur is also produced as a byproduct during several chemical, crude oil, and petrochemical refining operations such as tar sands recovery, petroleum refining, coking and metallurgical plants, and heavy oil and natural gas processing. Sulfur is one of the most abundantly available natural elements found on Earth. It is an important nutrient for animals, human beings, and crops. It is one of the key basic chemicals that is widely used as a raw material in the chemical industry. It is used in the production of sulfuric acid as a derivative, which is further used in several industrial and chemical processes, especially in the production of phosphate fertilizers.

The analysts forecast the global sulfur market to grow at a CAGR of 3.69% during the period 2017-2021.
