The idea behind this type of waste management is to utilize those discarded materials to manufacture new plastic products without the need to actually generate additional plastic materials. Doing so can help lower production costs as well as protect the environment.

The demand of plastics is huge and every year thousands of tones plastics is made, in turn much plastic waste would be generated and needs to be dealt with. Plastic Waste Management is aimed to reasonably deal with the plastic waste in order to protect the environment and save resources. Plastic Waste Management can help reduce the manufacturing cost of companies by recycling the materials. The treatment methods include landfill, recycle and incineration. Landfill is the main method adopted and about 44773 K MT was treated by landfill in 2016.
