

Levimoon, the World's First Levitating Moon Light, Officially Launches

Levimoon, the creative product of the Coocepts Team, a Hong Kong-based team with a passion for exploring creative concepts, officially went live.

HONG KONG, HONG KONG, June 11, 2018 /EINPresswire.com/ -- Levimoon, the creative product of the Coocepts Team, a Hong Kong-based product design and engineering firm with a passion for exploring creative concepts, this week officially went live for consumers around the world.

Relying on modern day technology to actually levitate a moon light, the

Levimoon is perfect for kids or adults looking for a clever and eye-catching, suspended night light with real colors, details, and configurations.

"To us, planets should be floating in the air – they shouldn't be on the ground or harnessed to a wall," said Kelvin So, Founder and Owner of Levimoon. "It was that exact thought that inspired our team to set out and develop the technology necessary for Levimoon. As the first levitating moonlight in the world, we are excited to explore the possibilities of suspended products in the future."

Levimoon comes with a suite of convenient features, including total restoration of the moon, easy levitating operation that can be maneuvered by anyone, wireless charging while levitating, changeable brightness and colors depending the user's preference, and portability for usage in other places while on-the-go.

To activate the Levimoon, the user clicks one touchable button on the bottom of the moon light, as well as one switch on the corresponding docking device. Now accessing two different levitation modes, one touch activates the white light mode, while two touches activate the yellow light mode, for a more soothing backdrop. Additionally, the product comes with a portable light mode, as well as a charging mode, with directions included.

"We want Levimoon to be as realistic as possible for users, emanating a natural white or yellow glow that we can see from the sky every night," said Kelvin. "Without creativity, life would be boring. To us, creativity is what dreams are made of, and with Levimoon, we're providing a creative sleep environment that will whisk sleepers away into far-off, adventurous dreams."

The Levimoon features realistic shading, coloring, and textures to highlight the real craters and qualities of the moon. Carrying up to 10-hours of full charge with its built-in battery, the moon can be moved around the home, to events, offices, and more to establish mood lighting in any setting.

"After perfecting the build-out with 3D printing technology, as well as working through multiple

collaborative sessions to really pool our expertise together, Levimoon was officially created," said Kelvin. "We're proud to be challenging the norm today, and are encouraging every young parent, caretaker, or just everyday consumer to consider the excitement, awe, and wonder of a Levimoon."

For consumers interested in seeing the Levimoon in action, Coocepts includes a demonstration video on their website platform detailing how to bring the at-home moon product to life.

Coocepts currently carries products in over 40 countries. Working within the crowdfunding sphere, the company invents, crowdfunds, manufactures, and distributes their award-winning products for consumers around the world.
